# ORANGERY CONSTRUCTION

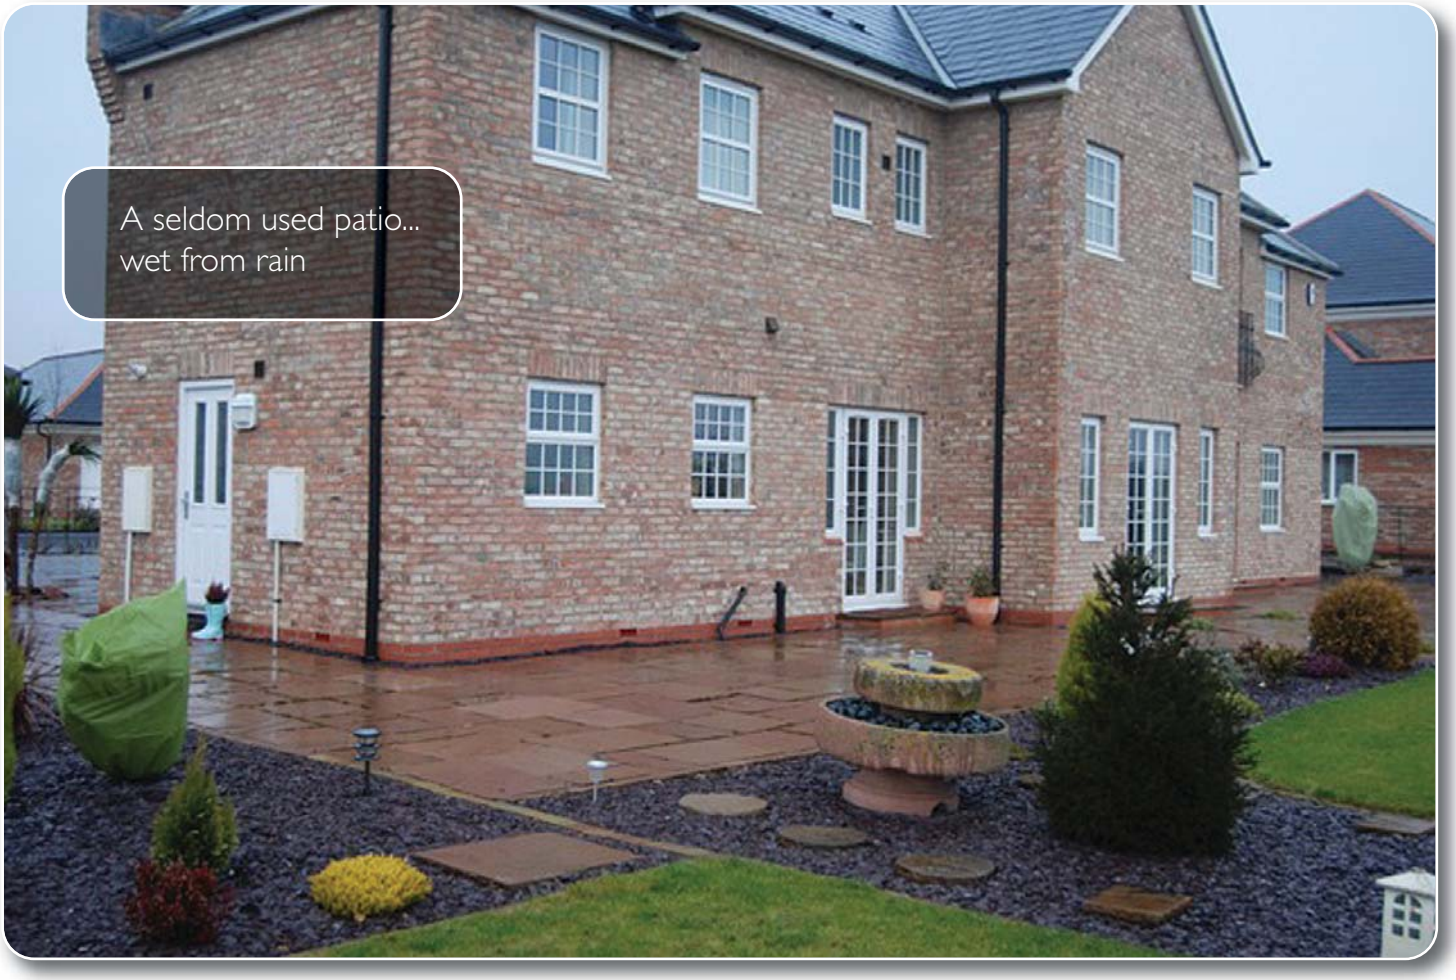
from

ADMIRAL

HOMESPACE

1

A modern house in a Georgian Style... more suited to an Orangery room than a traditional conservatory



A seldom used patio... wet from rain

Below ground the footings are prepared and drainage pipes bridged with steel

All brickwork is insulated

The room always looks quite small at this stage

The view from the garden is about to change

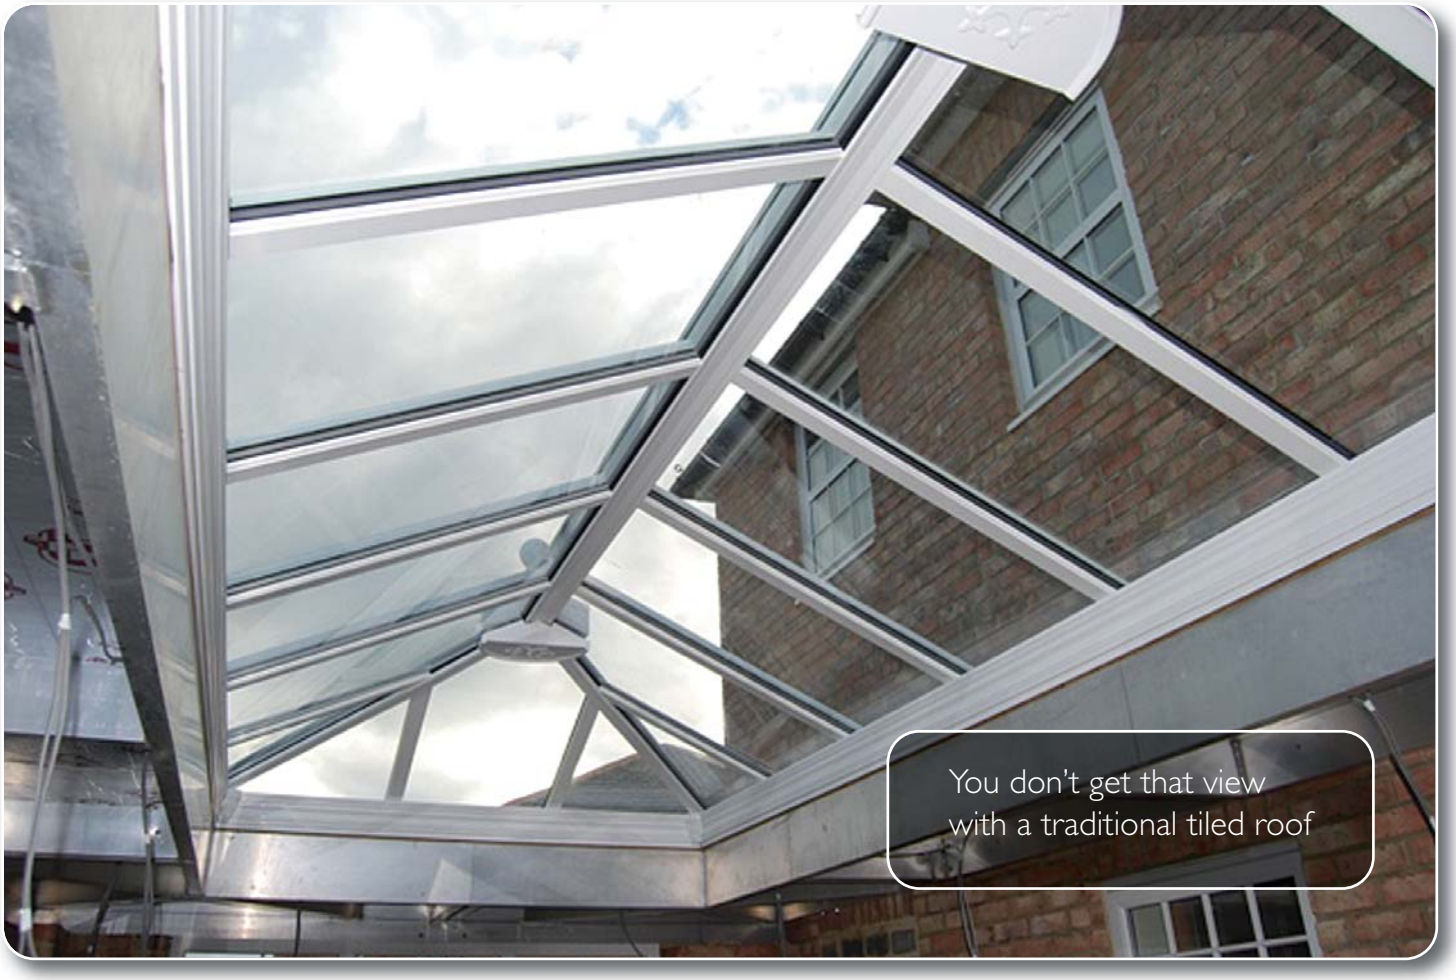
Our unique Aluminium ladder frame was pre-drilled and built in a factory environment

It simply bolts together on site meaning a most rapid installation

Most Orangery roofs are watertight within one day

The room is formed

The plasterer has done his work



You don't get that view with a traditional tiled roof

Maintenance free flat plinth and even self-cleaning glass

The house looks even grander now

The Orangery looks like it was built at the same time as the property

Bring on the Summer Barbecues !!
